DESCRIPTION

URETHANE OLIGOMER, RESIN COMPOSITIONS THEREOF AND CURED ARTICLE-
THEREOF

Technical Field

The present invention relates to a water-soluble resin and a resin composition that are ready to be cured by active energetic ray, and a cured article thereof. The present invention is applicable for a coating agent, a printing ink, a photoresist, a adhesive and an printing material.

Background Art

For promoting energy conservation or VOC prevention, active energetic ray such as ultraviolet ray has widely been applied for a plastic curing technology. As the VOC prevention recently asks the solubilization of plastics, so a suitable water-soluble resin is especially desired to develop.

For manufacturing a printed circuit board, a liquid or film state of photosensitive resin composition has been used. For example, the composition is used as a resist to etching the copper foil of a copper laminated layer board, serving for the limitation of soldering positions and the protection of circuits on the printed circuit board. There is a film state of printed circuit board, called the FPC (the flexible printed
